Our Promise

Industrial Plastic Valves Company provides an avenue for commercial manufactures looking for a low cost alternative for the flow regulation of air, water, gases and mild corrosives. IPV has been manufacturing and distributing high quality, low cost, general purpose solenoid valves for more than 20 years. We carry a complete line of control valves from sizes 1/8" to 3". We offer a wide range of solenoid voltages, body styles, seal materials, and solenoid wiring configurations.

Please visit our website, where you will find detailed descriptions of our low-flow, mid-flow and high-flow valve models. For additional information, specifications or if you have a specialized application, please contact us.

Low-Flow Valves

1/8" - 1/4"
0 - 5 GPM Flow Rates

DIRECT LIFT
Solenoid operated, two way
Low flow - normally closed valves

Mid-Flow Valves

3/8" - 1/2" - 3/4" NPT
3 - 20 GPM Flow Rates

DIAPHRAGM TYPE
Solenoid operated, two way
Mid flow - normally closed valves

High-Flow Valves

1" - 1 1/2" - 2" - 3" NPT
5 - 300 GPM Flow Rates

DIAPHRAGM TYPE
Solenoid operated, two way
High flow - normally closed valves

Engineering

The Industrial Plastic Valves product line of thermoplastic, brass and stainless steel general purpose solenoid valves were developed for precise control of water, oils, and other media. The valves are available in a continuous duty type designed for industrial and OEM applications.

All IPV valves have been subjected to thorough development and testing to prove their suitability for industrial control requirements. All valves are subjected to careful visual and testing inspection prior to shipment.

Our plastic valves offer lightweight construction, absence of electrolytic or galvanic action, and exceptional corrosion resistance to acids, alkalis, oils as well as many other hard to handle solutions.

Solenoid Actuators

Solenoid actuators can be purchased as a separate item. All voltages and solenoid configurations are available in 2-way normally closed only.

Materials

We offer three types of internal rubber seals for the handling of most fluids. Nitrile rubber (Buna-N) for general purpose use. EDPM rubber for acids and oxidizing fluids. Viton rubber for mild corrosives, chlorinated water, ozonated, DI and RO water purification.

Unlimited Applications

Pool & Spa Water Control Industry, Water Treatment, Water Purification, Car Wash Chemicals, Soap Dispensing, Hotel Ozone Laundry Cleaning, Water Parks, Playground Equipment, Air Conditioning, Refrigeration Equipment, Agriculture, Livestock and Poultry.

Specialty Valves

Need a normally open valve, a valve that operates with no water pressure or a brass or stainless steel valve?

We have them. Give us a call!
